Notes on [Technology, Mind, and Society Conference 2020](#)
[Joint Keynote: Lisa Feldman Barrett and Rosalind Picard](#)

1. Context is important, for humans and machines alike. Surrounding information informs our perception of the given situation
2. Human labels aren't necessarily good (emotion facial stereotypes vs. emotions on faces in reality).
3. The standard procedure may not be the best procedure -- figure out why the standard has been traditionally done that way and investigate alternatives
4. The concept of population modeling where statistical summaries are the abstraction and variance is the real data
